David Adeshina Arungbemi

I follow what moves me, then test whether it's true. Also writes as Suzume.

RESEARCH INTERESTS

- What a story changes in the model that takes it in
- Story-level understanding in multimodal models
- Generative models and human preference
- What images carry beyond words
- Small image models

EDUCATION

B.Eng. Computer Engineering, Nile University of Nigeria 2019 – 2024

First Class Honours, CGPA 5.0 / 5.0. Valedictorian and best overall graduate. 90% scholarship. Thesis (group project, three students): a wrist-worn gesture-recognition device using motion sensors. Our approach scored 94.9% on the public 6DMG dataset; retrained on our own device, it reached about 60% with two new users.

PUBLICATIONS

Narrative Transportation and Speciesism in Large Language Models 2026

D. A. Arungbemi. Preprint, not peer-reviewed. Zenodo. doi:10.5281/zenodo.21294610 · PDF

I gave five language models a story about an animal, the same facts written plainly, or an essay arguing for animals. Only the story clearly made their answers more caring toward that animal.

An End to End Wearable Device and System for Indefinite, Continuous, Real Time Gesture Recognition of Directional and Shape-Based Arm Gestures 2025

IEEE Access, vol. 13, pp. 153436–153463. Peer-reviewed. Co-author.
doi:10.1109/ACCESS.2025.3602871

My part: the AI that recognises the gestures, and the interface of the live app people use with it.

FELLOWSHIPS & PROGRAMMES

Research Fellow, MARS 5.0, Cambridge AI Safety Hub 2026 – now

A mentored AI safety research programme. I test whether training a language model on a story changes the values it acts on, comparing each story with the same text rewritten neutrally or with its ending flipped. I design the experiments and datasets, run the training (supervised fine-tuning, distillation, GRPO) on Gemma and Qwen models, and present results to the cohort. Mentor: Elizaveta Tennant (Google DeepMind / UCL).

- **A story that acts without being named.** Trained on a fable written as its own answers about itself, a small model (Gemma 4) shifted its decisions the way the fable does when it is in the prompt, while a control trained on an unrelated text moved the other way; no reasoning trace named the fable.
- **Values carried by preferences.** A story-prompted teacher model stated preferences over fruits, countries and languages; a student trained only on those preferences moved toward the teacher's values, though the story was named in none of 6,000 traces.

Research Fellow, Futurekind Fellowship, Electric Sheep 2026

A 12-week fellowship on AI and animal welfare, where I wrote the preprint above.

Selected, Diverse Intelligences Summer Institute 2026

An interdisciplinary programme on how humans, animals and machines think.

Finalist, MATS
Passed the coding and writing stages to reach the final round of a selective AI safety research programme, in its AI welfare stream.

EXPERIENCE

Co-founder & Lead AI, Gyronics Technologies Nov 2024 – now
An assistive wearable for accessibility that recognises arm gestures. I designed the device's look in Blender and built its gesture recognition, helped build the tool our team uses to watch participants' gesture data live, and made a view that draws a gesture as the path of a virtual pen.

Research Intern, National Centre for AI and Robotics, Abuja Feb 2025 – Jan 2026
A live video system that tracks people and objects and maps how near they are to each other, and a robot arm guided only by a camera.

SELECTED PROJECTS

LLM Art Director 2026
A language model edits photos guided by beauty scores, and a pretrained human-preference model (PickScore) rolls back edits a person would likely not prefer. When that check wasn't working, the scores rose while the photos got worse.

Story GRU language model 2025
A small model that writes stories, probed to watch meaning build up word by word.

Narrative–Technical Embedding Space 2025
Contrastive learning to tell stories from technical writing, as a first step toward translating between them.

Gestalt 2026
Can different images add up to the same whole? Very different starting images, optimised for structure, meaning and beauty, converged on almost the same picture, as judged by image models (not yet by people).

SELECTED WRITING

The Narrative Hypothesis 2026
What if the universe is a story? Not as a metaphor, but as the way reality is still unfolding.

Dream a Better Dream 2026
Understanding what we see before we can explain it, and what people bring to an AI future.

SKILLS

Research	Reading papers, designing and running experiments, evaluating results, writing them up and presenting them; fMRI modelling (public BOLD5000 data)
Models	Fine-tuning small language models (supervised, GRPO) with PyTorch, Hugging Face and Unsloth on RunPod; benchmarks; LLM-as-judge; multi-agent simulations
Building	Python (main) with Claude Code; C++ (ImGui / ImPlot); apps and visualisations in React and Three.js
Design	Wearable device design, data visualisation, Blender, creative coding in Processing
